

# Simulating our Universe

Andreas Burkert (Munich)

# *The Golden Age of Astrophysics*

What is the structure of the Universe?

How did it form and how does it evolve?

How did life form in the Universe?

Are we alone in the Universe?

# *The Golden Age of Computational Astrophysics*

What is the structure of the Universe?

How did it form and how does it evolve?

How did life form in the Universe?

Are we alone in the Universe?

# *The Golden Age of Computational Astrophysics*

What is the structure of the Universe?

How did it form and how does it evolve?

How did life form in the Universe?

Are we alone in the Universe?

- The Universe is **far from equilibrium**, non-linear and self-organized
- The Universe itself and its ingredients are **emergent structures** that connect processes on very different spatial scales and cannot be understood in isolation

Self consciousness
